

Quick start TreeCommerce Messenger

Requirements

Companies that want to use TreeCommerce Messenger have to meet the following requirements:

- A stable Internet connection
- A TreeCommerce-account (you can register by going to www.treecommerce.nl and clicking register)
- WinTree® version 8910 or above
- For growers: at least WinTree® CONNECT grower GREEN
- for traders: at least WinTree® CONNECT trader GREEN
- Participant must have their own GLN *).

*) GLN (Global Location Numbers) are used for international digital trade. These are EAN numbers that represent a physical or jurisdicitive entity. TCM uses this number to dependably exchange messages between users. If this number is not known to you, please contact TSD.

System settings

The following general system settings must be set before TreeCommerce Messenger can be used:

GLN-number

The sender and receiver are identified with a GLN-number when exchanging data. Your GLN-number must be set in the system settings (**File – Settings**) on the 'address' tab. Enter you number in the GLN company code field.

General settings

On the **settings – TreeCommerce Messenger** tab, some general settings for TCM need to be set.

The screenshot shows the 'Instellingen [968953]' window with the following settings:
